

EFFECTIVE SOLUTIONS

The extending arms that “walk” and large wheels minimise the effects on the environment. **The Spider** overcomes terrain obstructions, adapts to changes in the landscape and has an unhindered level and secure 360 degree working range.

DIFFICULT ACCESS

The Spider specialises in hard to reach areas. Its unique climbing ability and a chassis that can be varied from 2 metres to 5.6 metres wide for stability allows it to go where conventional machines can't. It has a minimum height of 2.7 metres.

EXCAVATION

The Spider can reach a depth of 4.8 metres and a height of 8.8 metres. It expertly handles excavation, lifting materials or accessing sites with steep terrain or without suitable access and can work without the need for benches or access tracks.

ROCK PLACEMENT

The Spider uses a rotating grapple for precise placement of rocks. Specialised equipment allows easy access to rock slopes.

CATCHMENT AND RIVER WORK

The Spider can work in water or mud up to 2 metres deep and has less impact on sensitive habitats than conventional equipment. It is well suited to working on embankments.

MULCHING AND LAND CLEARING

The versatility of **The Spider** is an advantage when mulching or clearing on steep slopes or inaccessible waterways. It has a felling and collecting attachment for tree removal.

DRILLING

The Spider can drill using posthole borers, blast holes and self drilling anchors. It can drill without needing benches or roads.

HIGH LIFT CAPACITY

The Spider can lift 1.8 tonnes at
7 metres radius depending on
ground conditions & attachments.

WINCHING

The winch on **The Spider** allows for greater security on extreme slopes and has a line pull of 8 tonnes.

WWW.MCCREADYENGINEERING.CO.NZ

STEEP SLOPES

The Spider is equipped with a winch for extreme slope work. It will operate across slopes of 70% and on slopes of 100%.
